DETAILED ACTION

1. The disclosure is objected to because of the following informalities: In the brief description of the drawings fig. 4 is not listed.

Appropriate correction is required.

2. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: In claim 14 there is no discussion of the drain regions in the specification.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-7, 9-12, 16, are rejected under 35 U.S.C. 103(a) as being unpatentable over Pratt, Jr. et al (4382660). For claim 1, Pratt, Jr. et al disclose in fig. 23 an optical transistor which has a light intensity modulator region 856 (see also col. 17, line 31) but does not necessarily show a photo conductor region, however, region 855 is an equivalent region where external light (a control light) will cause electron hole pairs that will effect the modulation of the incoming beam, and it is a design choice how this region is constructed as long as electrons and holes are formed that will effect the modulation. The types of terminals and modulators are design choices that are used to optimize the output. There is in col. 13, line 67, a discussion of a bi-stable system. Also one skilled in the art would know to form an array to be used in a communication system.

5. Claims 8, 13-15, 17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

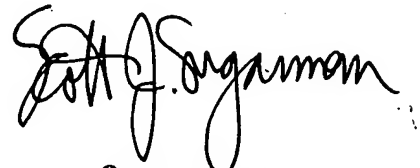

6. The following is a statement of reasons for the indication of allowable subject matter: In the claim system using quantum wells or having a second photo conductor or having a first and second array configuration is not shown or suggested by the prior art.
